# IKS POTLUCK MEETING 2:00 PM SUNDAY, FEBRUARY 16TH

HOST: LARRY AND DEBBY LEVERETT

5349 JASPER LANE, RIVESIDE 92506

951.781.3887

BRING FOOD AND CHAIRS!!!

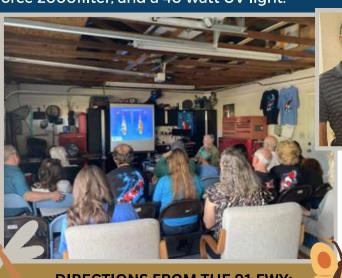

In 2007, Larry built this beautiful concrete pond with the help of the AKCA Guide to Pond **Construction**. The pond is a total of 4,500 gallons and uses three 300-gallon filters run by 1/4 horsepower pumps. This is enough to turn over the water every hour! From these filters, the water flows to two waterfalls and back to the pond. This ecosystem that the Leveretts' have created is home to about 50 fish all of vibrant color.

In 2012, Larry rebuilt a 400-gallon quarantine tank by his orchid house, a rockscape corner with waterfalls; it's at your left as you enter the garden gate. It has a 1/8 hp pump, a Bio Force 2000 filter, and a 40 watt UV light.

Because we are not certain as to what the weather will be like at our February meeting, we are prepared to stay warm and dry indoors! Larry & **Debby Leverett** are opening up their home to us where we will sit inside the garage for a Zoom presentation at 3:30 with guest speaker, Sue Kingston, who will give a presentation on "When the Unexpected Happens". Of course, we will all still need to bring our chairs and a food dish to add to our yummy buffet!!

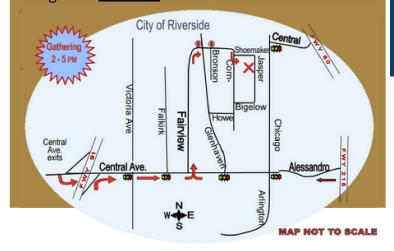

- Exit off Fwy 91 at Central Ave and go east.
- Left on Fairview, past 2 stop signs to Cornwall.
- Forced right on Cornwall, quick left on Shoemaker.
- Forced right on <u>Jasper</u>, and 5349 Jasper Lane is the second house on the right.

#### **DIRECTIONS FROM THE 215 FWY:**

- Exit off I-215 on Alessandro and head west.
- Right on <u>Fairview</u> and continue as stated above

Larry is a very social, honorable & giving man with a spontaneous wit. He is a plant and vegetable gardener using his green thumb wisely and always shares fruits of his labor. **Debby** is a creative, giving, and a humble woman. She is also interested in gardening, but mostly with flowers. Their interest in Koi started accidently. The gazebo came with the house they bought in 1989, but it was withered and the spa was not used. So, they moved and changed the personal spa to create a small pond

complimenting the new Amish Style gazebo they had built. Larry inserted some water plants and dozen goldfish to test the waters, but by this time saw a few other fish called Koi that he fell in love with. They bought a few Koi and learned of The Inland Koi **Society** by the fish dealers. Being beginners, They decided to try that club, hoping to gain more information and friends!

#### **Ponder This**

#### Do you have Chameleons in your pond?

**Question:** A club member heard there are two types of ammonia in our ponds, one good and one bad. She wants to know if she has any of the bad.

#### **Answer:**

**S**he heard right. But both are bad, just that one is much worse than the other. The very bad is free ammonia or NH3 and is very toxic to our fish. The not-so-bad is more properly called ammonium or NH4. Together, NH3 and NH4 are referred to as Total Ammonia Nitrogen or TAN.

Chameleons are small lizards that can change color to approximate their surroundings. As far as I am aware, I do not have any Chameleons in my pond, and I doubt if you have any either. However, we do have chemical "chameleons" that can change depending upon the environment of the pond.

TAN is that chemical "chameleon" in our ponds. TAN's components can change from ammonia to ammonium and back the other way around, depending upon the pH and the temperature of the pond. This change happens almost immediately with a change in pH or temperature. The neat thing about these "chameleons" is, at any given pH and temperature, the amount of the very bad chameleon (NH3) can be determined.

You can purchase some quite expensive equipment to measure ammonia (NH3) or to measure ammonium (NH4). But you don't need expensive equipment. Just measure TAN! For less than \$20 you can purchase a drip test kit that will be just fine for our ponds. You will also need to determine the pH and temperature of the pond. Now that you know the TAN, pH and temperature of your pond, refer to the attached chart.

This chart shows the maximum allowable amount of Total Ammonia Nitrogen (TAN) so that the bad ammonia (NH3) does not exceed 0.02 mg/L (0.02 ppm). This is a **very low** amount of bad ammonia. But this is the **maximum** amount that our koi can tolerate without apparent harm.

Ideally, your pond should show no ammonia. But if it does and the amount is approaching the value in the chart, you need to act. For immediate, short-term actions: quit feeding, do water changes, stabilize pH, and add an ammonia binder that is compatible with your test kit. For a more permanent reduction in ammonia, ensure your filters are working properly, are clean and are well maintained. You might also consider increasing turn over rate and adding additional filtration. Please note that restarting a filter after a winter shut down or adding new filtration may take several weeks to become effective.

**J**ust remember that having any ammonia, like chameleons, can rapidly change from the not so bad to the very bad with an increase in pH or temperature.

## -John Seifert, CKK Inland Empire Water Garden & Koi Society Spokane, Washington USA

This chart shows the Total Ammonia Nitrogen (TAN) allowable in our ponds so that the very bad ammonia (NH3) does not exceed 0.02 mg/l (0.02 ppm)

### 2025 Riverside Community Flower Show & Garden Tour

Celebrating our Citrus Heritage with Zest!

## Saturday & Sunday, April 26 & April 27

Gardens 10 am - 5 pm . Show 9 am - 5 pm

6166 Brockton Ave., Riverside

Garden Tour \$10 . 6 Local Gardens

Tickets available on our website (Children 16 and under Free)

Don't miss our Garden Fair at the Flower Show!

Submit an entry to our flower show for FREE!

Accepting entries Friday, April 25 only • 4 to 8 pm

#### Flower Show Seminars Include:

Saturday, April 26

Sunday, April 27

9:30 am Backyard

The Forever 9:30 am Wildfire Season

Citrus Care Lucy Heyming

Rebecca Levers

**UCCE Master Gardener** 

**UCCE Master Gardener** 

10:30 am Craft Demonstration: 10:30 am Herbs: How to Select.

Dehydrated Citrus Peel Mushroom Garland

Grow and Enjoy! Linda Powell

Debbra Corbin-Euston, Patty Walker, and Susan Wright

UCCE Master Gardener

**UCCE Master Gardeners** 

Flower Show & Garden Tours

For ticket sales and further information go to: RiversideFlowerShow.com Facebook.com/Riversideflowershow

\*Closed on Sundays\*

Thank you to Chien Lee
of Nijikawa USA and to
Iva Gaglione of Ultra
Balance for supplying the
Inland Koi Society with a
supply of nutritional koi
food for its rehoming
program!!!
